

MIGHTY BRIGHTY™

Projection Screen Paint

BY GRATCH INTERNATIONAL

Turns any wall into a projection screen!

Mighty Brighty makes projection possible in places such as:

- Round or circular areas long stretched walls (e.g. in corridors or next to escalators)
- 3D shaped surfaces and large surfaces
- Any shape you can imagine or paint
- Professional home theatres
- Shows and exhibitions
- Cafés and bars
- Offices, boardrooms and meeting rooms
- Educational institutions
- Museums
- Amusement parks

ENJOY THE RICHER COLOURS:

40% Higher contrast

20% More clear

THAN A NORMAL WHITE WALL

Source: test by Konica Minolta

Mighty Brighty is a unique concept for creating a perfect projection screen on the wall or any other smooth surface. Just paint it on, sit back and enjoy!

An image projected on Mighty Brighty Projection Screen Paint has much better contrast and brightness than projected on a plain white wall. It has the same quality like a professional projection screen. On top of that you always have exactly the right screen size for your specific situation. No more struggling to set up a conventional projector screen. No more bulky ceiling or wall fixture. Invisible when you are not using it.

How it works?

BaseCoat + ContrastBooster

The base of the screen is the BaseCoat, which also determines the contrast level. Based on an easy-to-use checklist you determine the right amount of ContrastBooster, which sets the grey level of the BaseCoat for the screen area. Mighty Brighty offers a range from light grey to ultra grey (high contrast), all in the same package.

TopCoat + BrightnessBooster

After applying the BaseCoat, a TopCoat is required. Using the same checklist, you determine the amount of BrightnessBooster, which sets the gain value of the TopCoat. Mighty Brighty offers a gain range from 0,9 up to 1,4 depending on the amount of light the projector emits and some other criteria.

MagneBorder

The unique MagneBorder is optionally available. This border greatly heightens the contrast perception of images on the screen. A magnetic paint must be applied prior to the BaseCoat. The magnetic borders can be easily placed and removed from the projection area. When the MagneBorder is removed, all you see is a clear wall.

GRATCH®
INTERNATIONAL

Create a projection screen with
Mighty Brighty Projection Screen Paint
in just 3 (optional 4) easy steps:

1. Define the exact size and location of the screen.
Optional: Apply the MagneCoat on the border of the screen.

2. Mix and apply BaseCoat to the wall **(2 layers)**.

3. Mix and apply TopCoat to the wall **(2 layers)**.

4. **Optional: Add the MagneBorder around the screen.**
(And easily remove it when you are not using the screen).

MPW 10 Standard Screen

Pre-mixed, highly reflective paint. Easily apply a standard projection screen up to 5 m² (54 sq. ft.) on your wall or board.
