

MIGHTY BRIGHTY

PROJECTION SCREEN PAINT

Turns any wall into a projection screen!

Mighty Brighty makes projection possible in places such as:

- Round, circular or stretched walls
- 3D-shaped surfaces and large surfaces
- Any shape you can imagine or paint
- Professional and home theatres
- Shows and exhibitions
- Cafés, bars and bowling areas
- Educational institutions and universities
- Museums
- Offices, board- and meetingrooms
- Amusementparks
- Simulation centers

Enjoy the richer colours:

40% Higher contrast

20% More clear

than a normal white wall

source: tested by Konica Minolta

Mighty Brighty transforms walls into professional projection screens. Just paint it on, sit back and enjoy!

Mighty Brighty Projection Screen Paint delivers enhanced contrast, improved brightness and sharp image definition compared to a standard white wall. The result is a clear, high-quality projection surface suitable for offices, meeting rooms, educational facilities and home cinemas. Create a projection area in the exact dimensions required for your space. The surface remains discreet and unobtrusive when not in use. A practical solution for modern presentation environments.

How it works?

BaseCoat + ContrastBooster

The screen starts with the BaseCoat. This layer determines the contrast of the projection surface. With a simple checklist, you select the right amount of ContrastBooster. This sets the grey level of the screen area. By adjusting the grey tone, the screen can be matched to the projector and the lighting conditions in the room. Mighty Brighty offers a range from light grey to ultra-grey (high contrast) – all within one complete package.

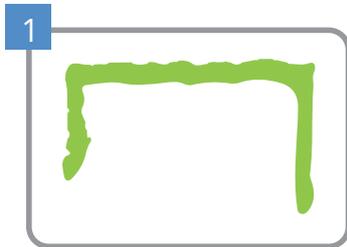

TopCoat + BrightnessBooster

After applying the BaseCoat, a TopCoat is applied to complete the screen. Using the same checklist, you select the right amount of BrightnessBooster. This determines the gain level of the TopCoat. By adjusting the gain, the screen can be matched to the projector's light output and the lighting conditions in the room. Mighty Brighty offers a gain range from 0.9 up to 1.4, allowing the screen performance to be optimized for different projectors and environments.

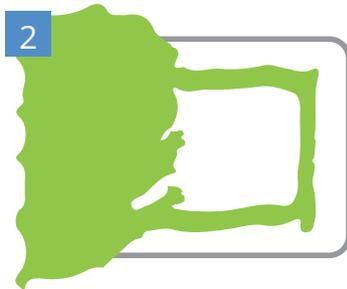

MagneBorder

The unique MagneBorder is available as an option. This border enhances the perceived contrast of the projected image, giving it a sharper and more defined appearance. Before applying the BaseCoat, a magnetic paint is applied to the wall. The magnetic borders can then be easily positioned around the projection area and removed at any time. When the MagneBorder is removed, the wall remains clean and unobtrusive, with no visible frame.

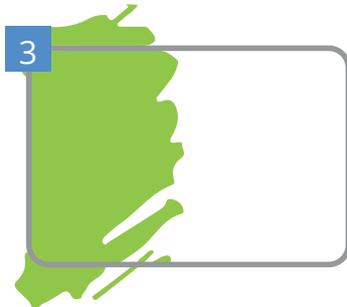

**Create a projection screen with
Mighty Brighty Projection Screen Paint
in just 3 (optional 4) easy steps:**

1. Define the exact size and location of the screen.
Optional: Apply the MagneCoat on the border of the screen.

2. Mix and apply BaseCoat to the wall (2 layers).

3. Mix and apply TopCoat to the wall (2 layers).

4. Optional: Add the MagneBorder around the screen.
And easily remove it when you are not using the screen.

MPW 105 Standard Screen 5 m²

Pre-mixed, highly reflective paint. Easily apply a standard projection screen up to 5m² on your wall or board. The kit contains pre-mixed BaseCoat and pre-mixed TopCoat, sanding paper and stir sticks.

MPW 225 Tailor Made Screen 25 m²

Kit up to 25 m² of projection screen. The MPW 225 kit includes BaseCoat, ContrastBooster, TopCoat and BrightnessBooster. Tools like sanding paper and stir sticks are included as well.

MPW 350 Tailor Made Screen 50 m²

Kit up to 50 m² of projection screen for a complete wall. The MPW 350 kit includes BaseCoat, ContrastBooster, TopCoat and BrightnessBooster. This kit can be used to paint multiple meetingrooms or to paint an extra-large wall in public areas (airports, exhibition stands, museums etc.).

MPA 410 Magne Border Kit 10 m

Kit contains magnetic paint and magnetic borders to easily create a dark, removable border around the projection area. This border heightens the contrast perception of the images on the screen. The magnetic paint is applied under the BaseCoat. The MagneBorder can easily be removed.

MPA 420 Clean! Projection Screen

High performance cleaner for all projection-screens, fabric and painted. Cleans the screen in one treatment. Removes stains without damaging the reflective coating.
