3-step grinding and polishing process for glass renovation and removal of:

- Deep scratches or damages
- Acid-graffiti and vandalism tags
- Welding or grinding splatters
- Limescale and other contamination on glass

Specially developed cushioned RevoDisks for a distortion-free repair!

Glass renovation & Scratch removal

RevoGlas, a brand of Gratch International, manufactures systems and supplies for removal of glass scratches, acid-etch graffiti and other damages from all types of glass. RevoGlas is a unique solution for glass renovation without leaving tracemarks or distortion like wavy glass or lenses. The systems are designed to handle almost all types of glass damage and provide the operator an effective way to quickly restore glass. The systems feature high quality and reliable components. Combined with our uniquely designed RevoDisks and the patented backing disks the RevoGlas process offers speed and succes in repairing damaged glass.

The RevoGlas systems

The RevoGlas system is available as a Pro version and a Lite version. The Pro system contains all available disk-sizes and comes in a high-grade system case, so all materials are well protected on location as well. The Lite version of the system contains the 5" and 6" sizes and is delivered in a storage case. Apart from these complete systems, we can supply you with some smaller startkits; StarterKit and StarterKit XL.

The RevoGlas supplies

The unique RevoDisks are the base for a good result in glass renovation and are available in 4 different sizes (3", 5", 6" and 8") and 5 grinding ranges to match every type of scratch or damage. It is not necessary to go through all individual steps, so time is saved. The revolutionary design and the construction are proprietary to the RevoDisks. The RevoDisks are build with a base-material that keeps sharp for long time. The RevoDisks also employ a special cushioned design that prevents leaving swirls, lenses or distortion, even on deep damages. The RevoDisks are coded for quick identification.

RevoDisks (color) coding	
BLUE (A#)	Slight damages
BLACK (B#)	Medium damages
GREEN (C#)	Deep damages
RED (D#)	Severe damages
GREY (PP#)	Pre-polishing disk; preparation on a fast polishing procedure

RevoGlas Polishing Compound is an advanced formula, soft setting mixture to assist in the scratch removal and glass renewal (polishing) process. After application of the PP# pre-polishing RevoDisk (step 2 in the proces), the polishing phase is the finishing of the glass repair. The RevoGlas Finishing spray easliy removes the residu of the polishing compound and cleans the glass completely after the repair.
